

On the Links between Nervous System Theories and Artificial Intelligence

Acknowledgments

**to The Rector of Óbuda University, Prof. Fodor
to The Senate of this University**

to The University of Las Palmas de Gran Canaria

**to EUROCAST Conferences (specially to one founder,
Prof. Franz Pichler, Linz) and to Workshop Chairman
Dr. Ryszard Klempous, Wroclaw)**

On the Links between Nervous System Theories and Artificial Intelligence

Formal Neurotheories (Neurocybernetics)

The Three Key Triggering Contributions

Wiener's
Cybernetics

**Communication and Control
in animals and machines**
(Wiener, Roseblueth, Bigelow, 1943)

Nervous Systems
Logical
Paradigms

Distributed Computation and Decision
Formal Neural Nets
(Mc Culloch, Pitts, 1943)

Conceptual Bases
of Robotics

The Nature of Explanation
(Craick, 1943)

Key points in Wiener's Cybernetics (1947)

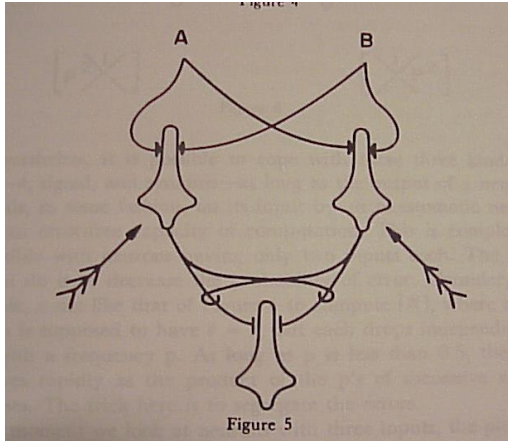

- Feedback, from the outcome to the input
- Information, not energy in the feedback loop

Origin of the concept of information (Ch.S.Peirce
“third quantity”)

- Fisher (from the classical statistical theory)
- Wiener (from noise and message in electrical filters)
- Shannon (from problems in coding)

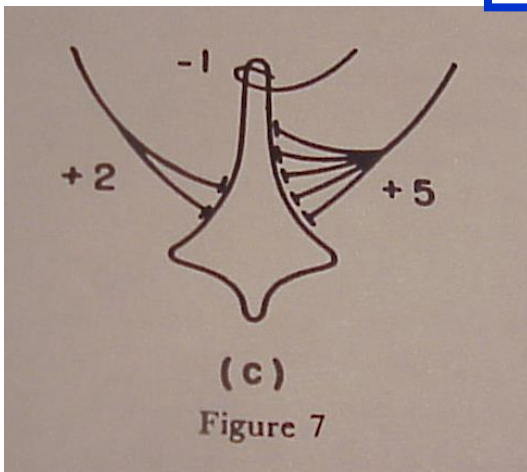

Basis of homeostasis and reactive agents

McCulloch and Pitts Neural Nets

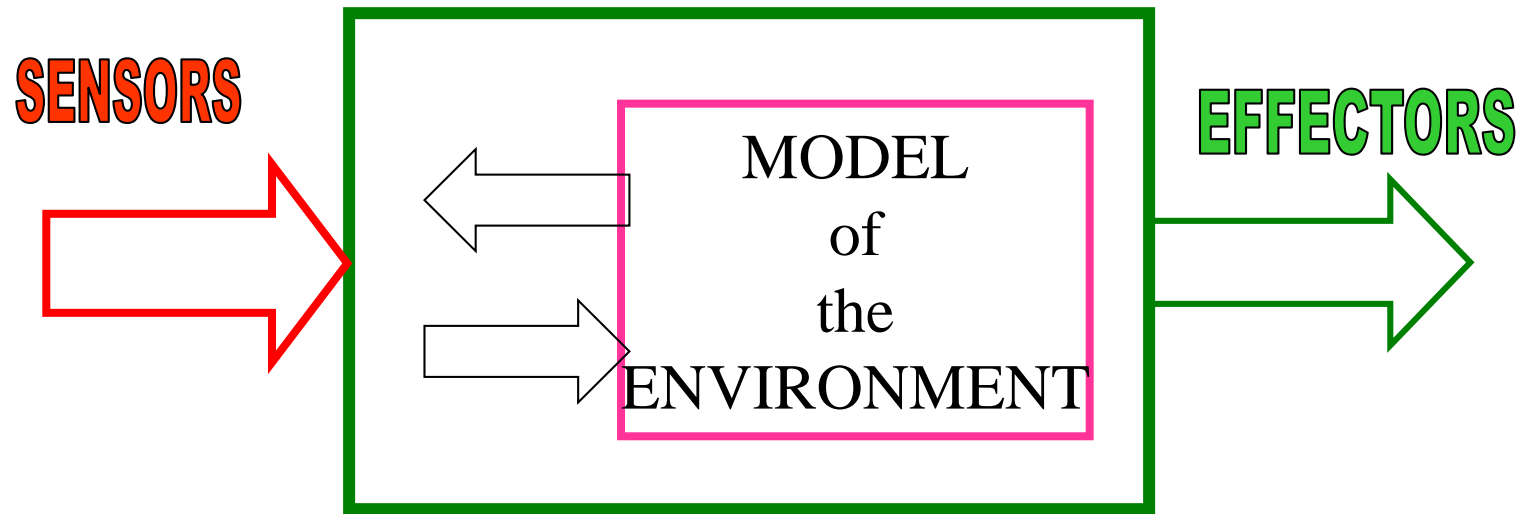

The formal Neuron is a logical unit that embodies the basic properties of excitation, inhibition, threshold and “all or none” inputs and outputs

A neural net with loops can compute any number that a Turing Machine with a finite tape can. It is equivalent to what later will be called a “finite automaton” with a modular realization with the simplest units

The roots of Connectivism

Simplified Craik's Constructivist Model

Basis of Symbolic Agent A.I. and Robotics

1943-1953

The Josiah Macy's Foundation Conferences

Ten Conferences on *Circular, Causal and Feedback Mechanisms in Biological and Social Systems*

Some of the attendants

**W.S. McCulloch (Chairman), J. von Neumann, N. Wiener,
A. Roseblueth, J. Bigelow, C. Shannon, W. Pitts, W. Ross-Ashby,
W. Grey-Walter, R. Lorente de Nó, L. Kubie, D. McKay,
L. Pauling, K.S. Lashley, H. von Foerster**

The Josiah Macy Foundation Conferences 1943-1953

- **Antecedent: meeting in 1942 of engineers, physiologists and mathematicians, where “Behaviour, Purpose and Teleology” by Wiener, Rosemblyeth and Bigelow was presented**

Some of the many concepts and subjects treated:

- * **Regulation, homeostasis and goal directed activity**
- * **Transmission of signals and communication**
- * **Neural nets and automata theory**
- * **Closed loops in the central nervous system**
- * **“Circular causality” in economics and the polling of public opinion**
- * **Conflict between motives in psychiatry (heterarchy of values)**
- * **Reverberating and content addressable memories**
- * **Learning as changes in transition probabilities**

CONTENTS

INTRODUCTION.....	7
CHAPTER I. Newtonian and Bergsonian Time	40
CHAPTER II. Groups and Statistical Mechanics	57
CHAPTER III. Time Series, Information, and Communication.....	74
CHAPTER IV. Feed-Back and Oscillation	113
CHAPTER V. Computing Machines and the Nervous System.....	137
CHAPTER VI. Gestalt and Universals.....	156
CHAPTER VII. Cybernetics and Psychopathology.....	168
CHAPTER VIII. Information, Language, and Society.....	181

Neurocybernetic Problems introduced (and, in many aspects, still open) in the Macy's Conferences (1955's)

- * **Regulation, homeostasis and goal directed activity**
- * **Nervous System Multiple Coding and Transmission of signals and communication**
- * **Neural nets and automata theory**
- * **Closed loops in the central nervous system**
- * **“Neuralcircular causality” and its counterparts in economics and in the polling of public opinion**
- * **Conflict between motives in psychiatry (heterarchy of values)**
- * **Reverberating and content addressable memories**
- * **Learning as changes in transition probabilities**

At the Research Laboratory of Electronics (From 1952) in Warren McCulloch environment

- **Lettvin, Maturana, McCulloch and Pitts “What the Frog’s Eye tells the Frog’s Brain” (1959) Epistemological Neurophysiology**
- **“Two Remarks on the Visual System of the Frog” (1960) (Lettvin)**
- **“Towards a Probabilistic Logic” (1959) (Winograd, Cowan)**
- **Reliable computation with unreliable components**
- **“What is a number...”**
- **Search for a theory of brain function based on abductive logic**
- **Modes of decision of the vertebrates (The reticular formation)(Kilmer)**
- **“Circularities in Nets and Functional Matrices” “Triadic Relations”**
- **Models of dynamic memory and towards a theory of intensional relations (Da Fonseca)**

The MIT Press 1965

Later Classical Neurocybernetics Problems

***Reliable computation in nets (From McCulloch, von Newman)**

***Adaptive Systems and Learning (From Ashby, von Foerster, Caianiello)**

***McCulloch's Programs**

I Logical Synthesis: Neuronal Counterparts of Logical Machines

II Computer Metaphors in the Synthesis of Nervous Structures and Activities (Reticular Formation Paradigm)

**Neurocybernetics-Artificial Intelligence
Marvin Minsky's AI MIT Laboratory**

BRAIN PROCESSES, THEORIES AND MODELS

An International Conference in Honor of W. S. McCulloch
25 Years after His Death

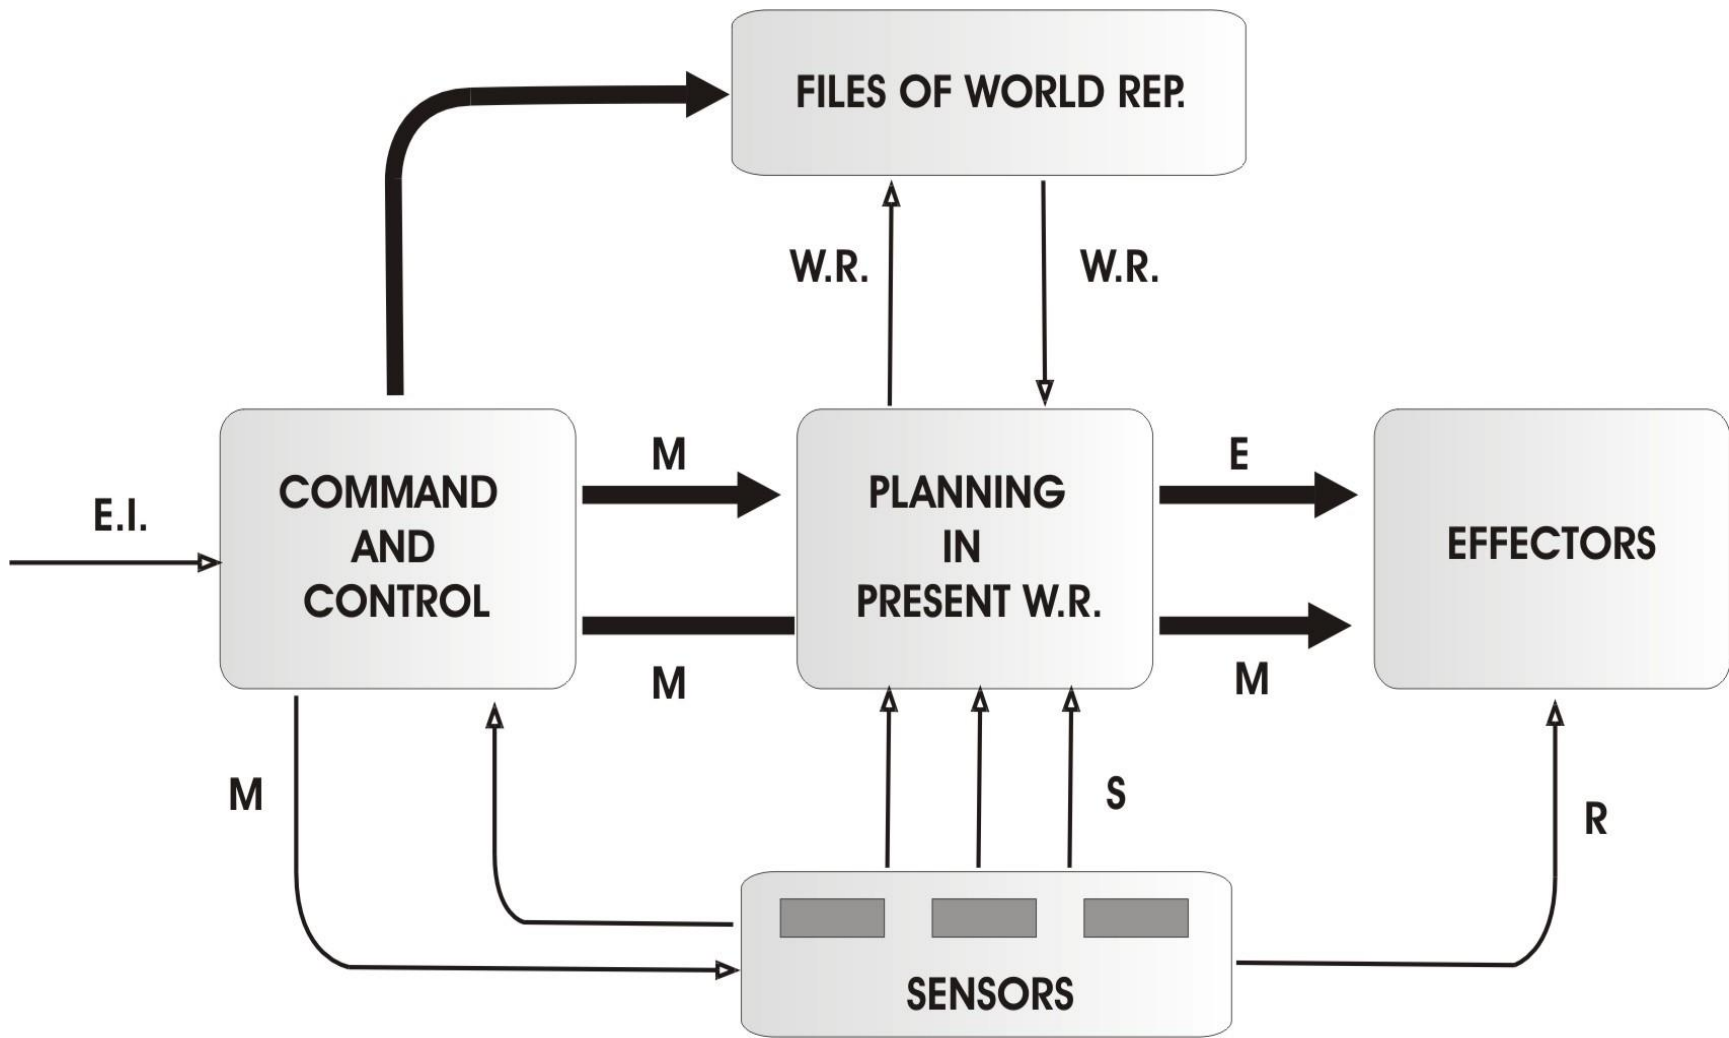

edited by

Roberto Moreno-Díaz and José Mira-Mira

McCulloch, 25 years in Memoriam, Nov. 1995

**LAS PALMAS
INTERNATIONAL
CONFERENCE
WIENER'S CYBERNETICS: 50
YEARS OF EVOLUTION.**

Casa de Colón, Las Palmas de Gran
Canaria, Canary Islands, Spain
FEBRUARY 8-11, 1999.

Organized by:

Universidad de Las Palmas de Gran
Canaria.
Instituto Universitario de Ciencias y
Tecnologías Cibernéticas.

Johannes Kepler Universität Linz.
Institut für Systemwissenschaften.

Universita di Napoli.
Dept. di Matematica e Applicazioni
"Renato Cacciopoli"

General Chairman: Prof. Roberto Moreno-Diaz
Program Chairmen: Prof. Franz R. Pichler
Prof. Luigi M. Ricciardi.

International Program ADVISORY Committee:

Aihara (JAPAN),
Albertos (SPAIN),
Albrecht (AUSTRIA),
Beer (CANADA),
Braitenberg (GERMANY),
Born (AUSTRIA),
Della Riccia (ITALY),
De Zeeuw (NETHERLANDS),
Klir (USA),
Kopacek (AUSTRIA),
Kornwachs (GERMANY),
Hauske (GERMANY),
Leibovic (USA),
Longo (ITALY),
Maravall (SPAIN),
Marinaro (ITALY),
Mira-Mira (SPAIN),
Miro (SPAIN),
Rav (FRANCE),
Sato (JAPAN),
De Pauli-Schimanovich (AUSTRIA),
Trapp (AUSTRIA),
Vallee (FRANCE).

Organizing Committee:

R. Moreno-Diaz jr.
W. De Pauli-Schimanovich
G. de Blasio-Garcia
M. Aleman-Flores
A. Quesada-Arencibia
E. Draxler

Scope: The general aim is to revisit the
contents of Wiener's book and to explore the
evolution of the subjects of the different chapters of
the book:

- Newtonian and Bergsonian Time,
- Groups and Statistical Mechanics,
- Time Series,
- Information and Communication,
- Feed-Back and Oscillation,
- Computing Machines and the Nervous System,
- Gestalt and Universals,
- Cybernetics and Psychopathology, Information,
- Language and Society.

Of specific interest is to explore the
relation of Wiener's approach to current key topics
such as Neuroscience, Artificial Intelligence,
Robotics, Artificial Life, Genetic Algorithms,
Fuzzy Logic, Complexity Theory and others.

Key objective of today's “Computational Neurotheories”

- **Obtaining Computable Models and Theories of nervous activity, from membrane phenomena to perceptual, cognitive, behavioural and social processes**

Equivalence?

Neurocybernetics

Computational Neurotheories

LEVELS AND FORMAL TOOLS IN NEUROCYBERNETICS

Level

Formal Approaches

**COMPUTING
AS
TOOLS**

Neurotransmitters, membrane phenomena, action potentials

Biochemistry, Biophysics

Biophysics of neural codes and multiple codes

Biophysics, Signal Processing

Sensorial codes, decoding in motor and glandular effectors, coding in the Retina

Space-time System Theory

Neural nets, input output interaction and coordination. Brain subsystems

Algorithmic (Logic, Symbolic) Connectivistic A.I.

Central neural code, cooperative processes, perception of universals, social-like behaviour

Symbolic, Methods and Techniques of Cognitive A.I.

**COMPUTING
AS
METHAPHORS**

Three Focousing of A.I. links to Neurocybernetics

Symbolic A.I.

Situated A.I

Connectivistic A.I.

Situated and Connectionist A.I

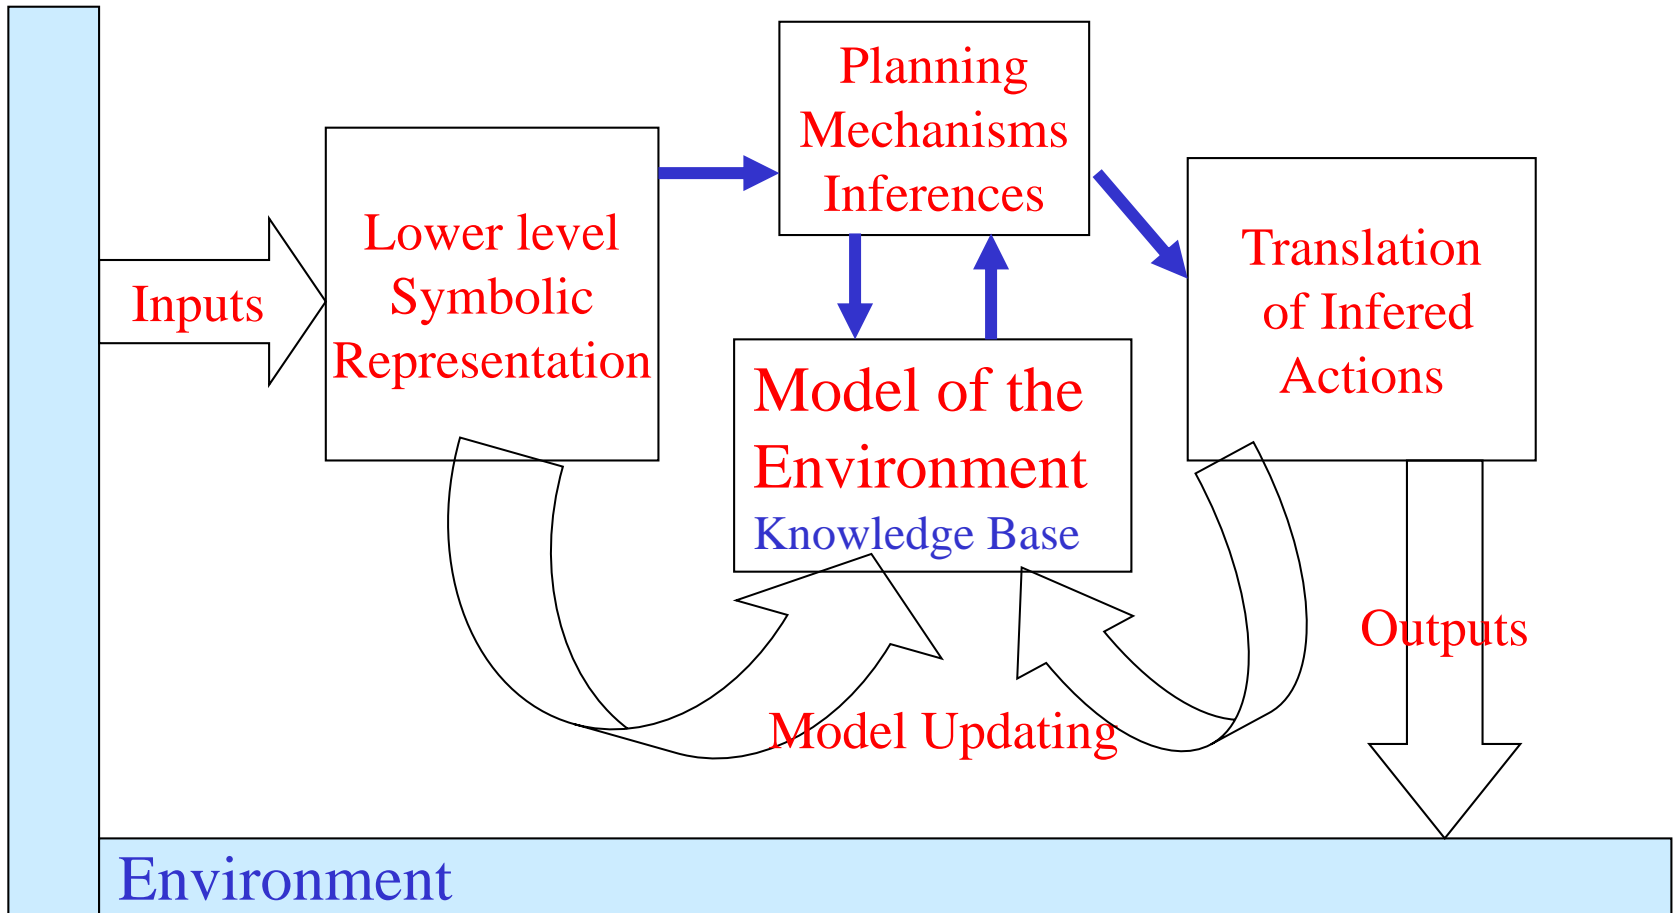

Computational Intelligence.

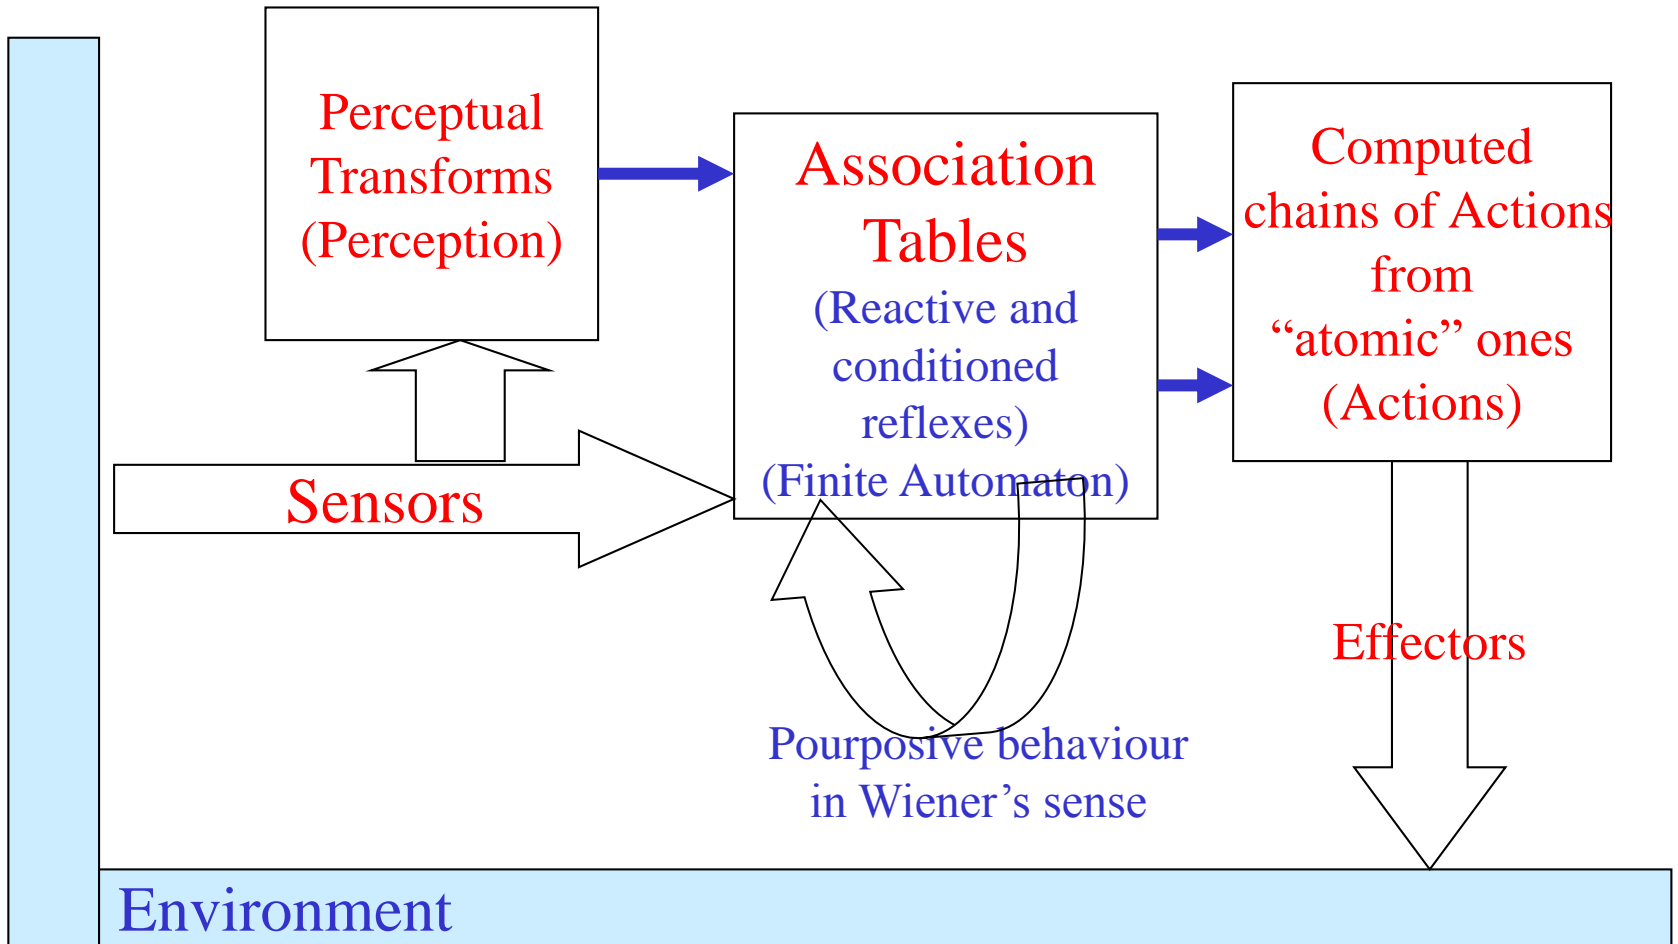

(Symbolic A.I.

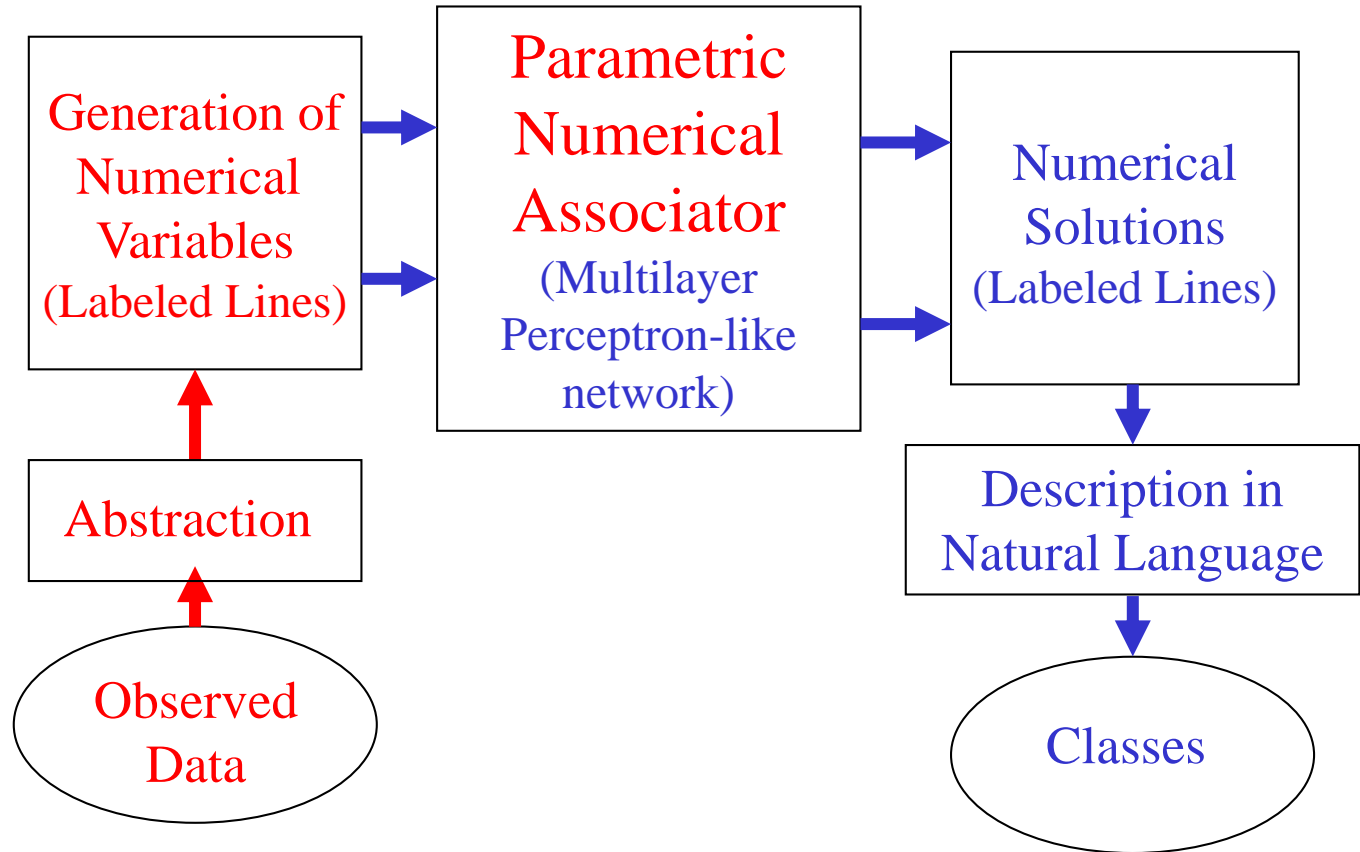

GOFAIR)

Updated view of Craik's proposal (Symbolic Agent A.I.)

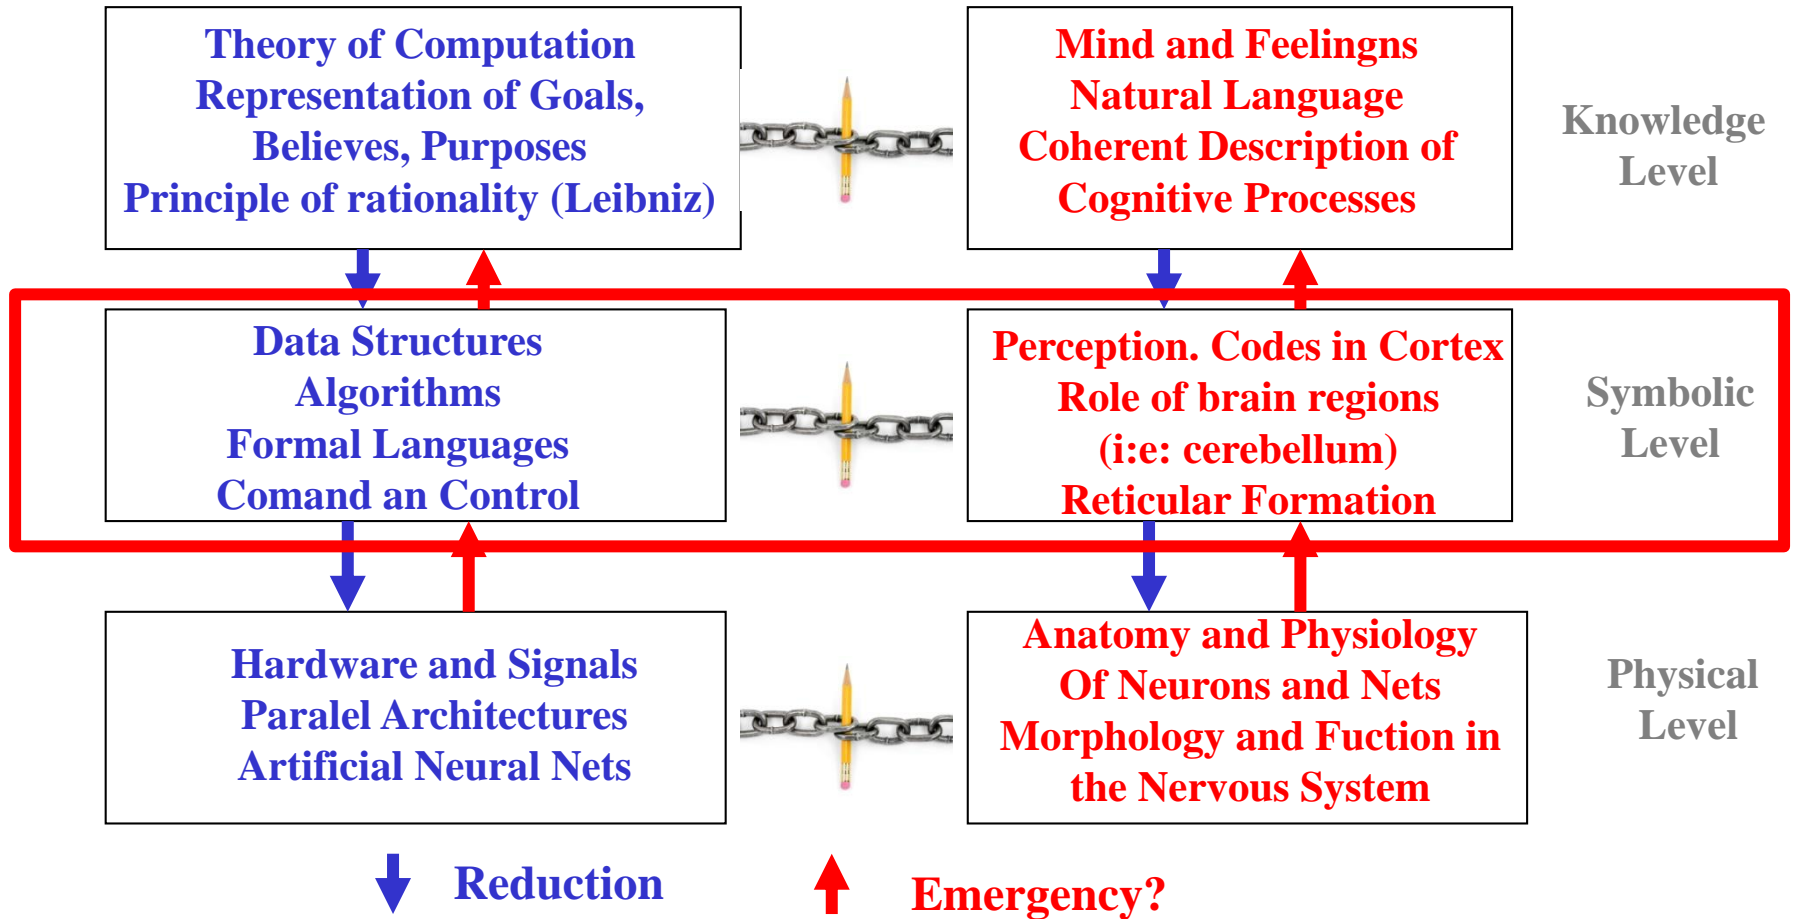

Architecture of a Situated I.A. System (Reactive Agent)

Typical Connectivistic A.I. Application
Architecture of an Artificial Neural Net

Computing Cognitive A.I.

Neurocybernetics

Linking Computing Science and Neurocybernetics.

Some open areas of metaphors in the interaction of Neurocybernetics and Computing at the Symbolic Level

- **Logic of Intentions and the Theory of Triadic Relations**
- **Visual World Representation (World of Illusions) and Coding in Visual Cortex**
- **Computing Models of Chains Perception-Action**
- **Multisensorial integrated representation of data**
- **Reliability and Multifunctionality of computing units and subsystems (Cerebral Dynamics)**
- **The Problem of Command and Control (homunculus)**

McCulloch, Moreno-Díaz, Sutro,. RLE, MIT, 1965

MCCulloch : “I want to know what is a number that humans may know it; and humans, that they may know a number”

Rufus Jones : “Friend, thee will be busy as long as thee lives”
