

Óbuda University

Predecessor : Budapest Tech

Faculties

**Rejtő Sándor
Faculty of Light
Industries &
Environment
Engineering**

**Keleti Károly
Faculty of
Economics**

**Kandó Kálmán
Faculty of
Electrical
Engineering**

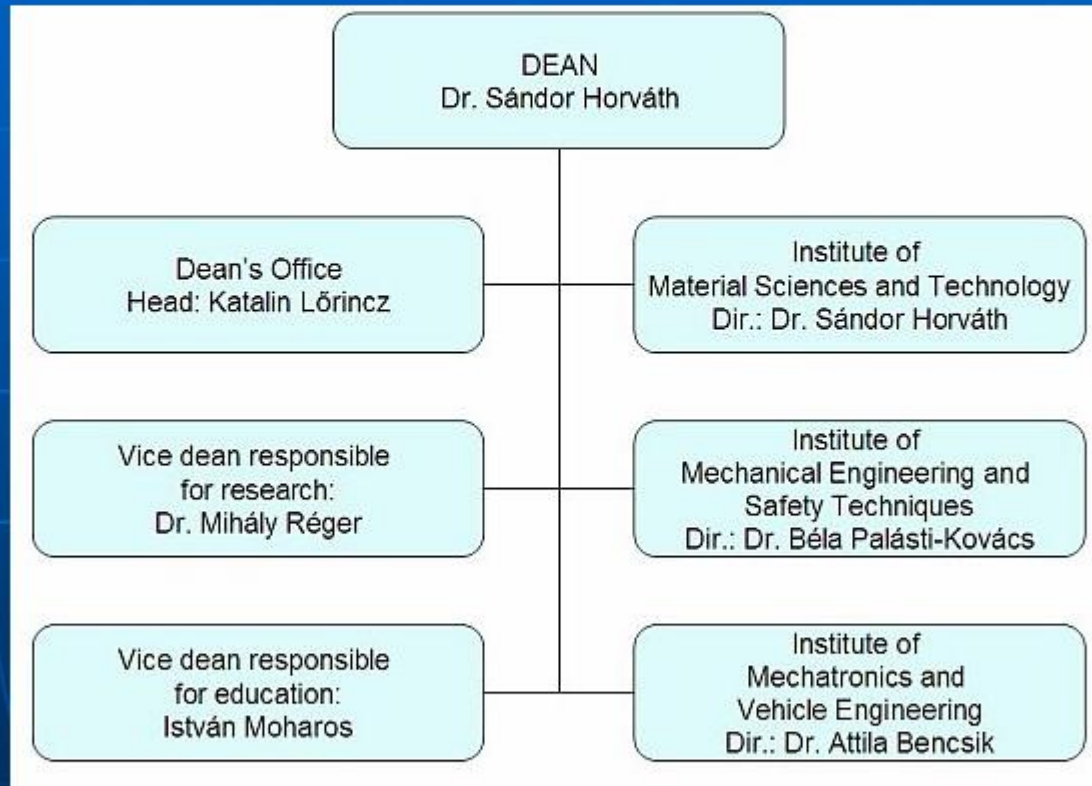

**John von Neumann
Faculty of
Informatics**

**Bánki Donát Faculty of
Mechanical Engineering
& Security Technology**

**Teaching
Robotics**

Organisation

1859 - 1922

Donát Bánki

Lot of developments:

- in fluid techniques,**
- Gear level of vehicles**
- Carburetor**
- water turbine**
- Lot of books and patents**

1881 - 1955

József Galamb (student):

In 1905 at the Detroit (Ford) Vehicle Factory has been developed the *Ford T-model*

**Donát Bánki Faculty
of Mechanical Engineering
& Safety Technology**

I n s t i t u t i o n s

Material Sciences & Technology

**Mechanical Engineering & Safety
Techniques**

Mechatronics & Vehicle Engineering

Institute of Mechatronics & Vehicle Engineering

The history and future of the Mechatronic Course at the Institute

- **1987** – has been introduced the **new Teaching Plan**
- **1995** - **Integrated** (Mechanical and Electrical) **Engineering BEng** education
- **1997** – starting date of the project: **Mechatronic Course** at the Budapest Tech.
- **2005/06** – The first entrance interviews to the **BSc Mechatronic Course** at the Budapest Tech
- **2008/09** - The first entrance interviews to the **MSc Mechatronic Course** at the Budapest Tech

The basic subjects of Mechatronics

Compulsory

- Basic of Informatics
- Basic of Mechatronics
- Analog & Digital Circuits
- Control Engineering
- Pneumatics & Hydraulics
- Electronics
- Interfaces
-
-
- **Industrial Robot systems 1,2**

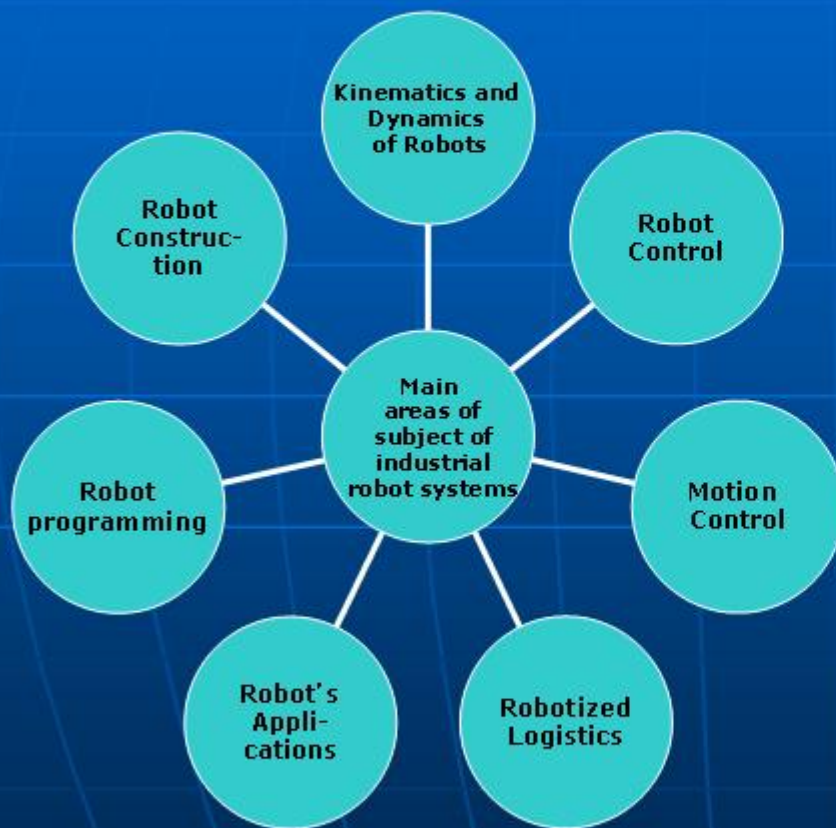

Facultative

- PLC programming
- PIC programming
- Mobile Robotics
- PLA programming
- Intelligent Robot's systems
-
-

The subject of Industrial Robot Systems 1, 2:

Main areas belonging to the subject of industrial robot systems:

Through applications students acquire the principles and phenomena of mechanical systems, mechanical micro-drivers, the ability of micro-manipulation, intelligent functions, the various strategies of regulation and control engineering, as well as movement control and path planning techniques and robot's kinematics and dynamics.

The Laboratories and Courses :

The PLC Laboratory - pneumatic valve control, PLC programming course

The Robot Laboratory: Mitsubishi, Yamaha, Serpent, Bosch 3D Robot Manipulator

The Robot Programming Laboratory - Fanuc, Yamaha (Cosirop) on MELFA Language

The PIC Programming Course: PIC Mechatronic Board

The PLA Programming Course

The Mobile Robot's Developing and Programming Course

Circuit Design by TINA, Course

- Digital Circuits
- Analog Circuits

Measurements on Mechatronical Units - Leybold

Measurements on Mechatronical Units

The Basic Mechatronical Units:

- DC Motor Units (Serial and parallel configuration)
- AC Motor Units
- universal motor unit (repulsive)
- **3-phase motor unit**

On these Mechatronical units we are providing measurements and analysis's.

Usually we are setting up the starting parameters (*input voltage*) and then we are displaying and measuring the outputs (*torque, RPM, and different characteristics, ...*)

Pneumatic valve Control by PLC:

Teaching Robots at the Mechatronic Laboratory

PLC Controlled Bosch Robot Manipulator:

BOSCH PLC

ECO Drive

3-phase synchronous motor

**Pick & Place
operations by
chess figures**

PLC Controlled Separator:

The whole system:

Sensing of the material of the sample:

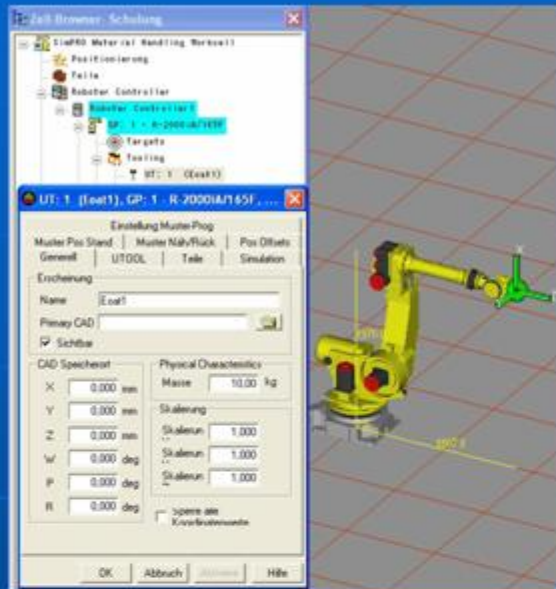

Sample gripping:

Sorting, based on sample material:

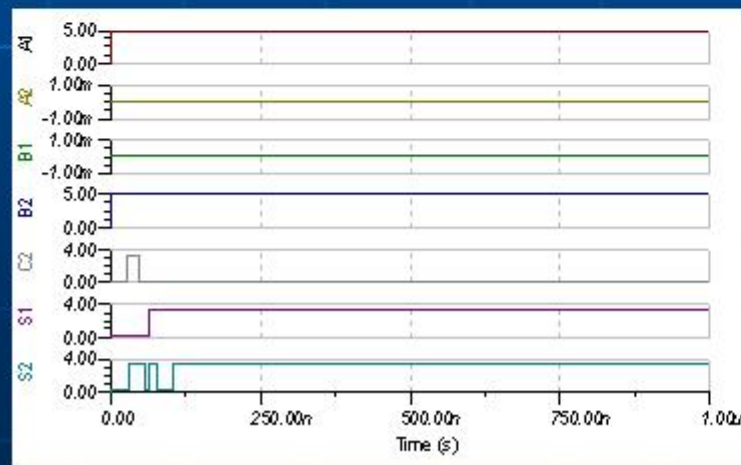

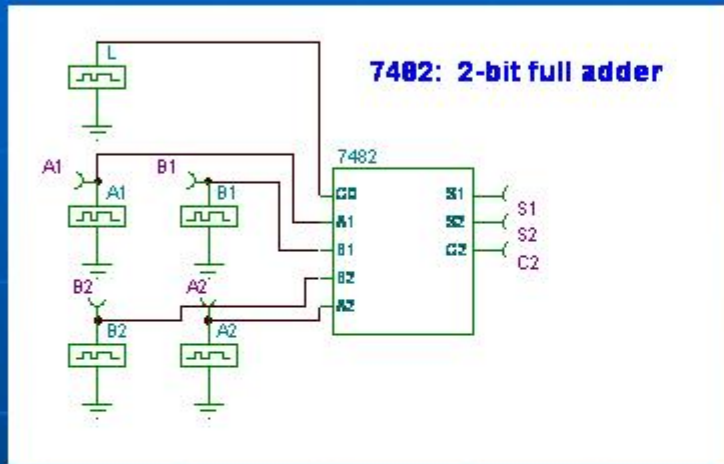

Fanuc: Robot simulation software for Robot Manipulator - RoboGuide:

Electrical Circuit Design by Tina:

Logic IC design & analysis

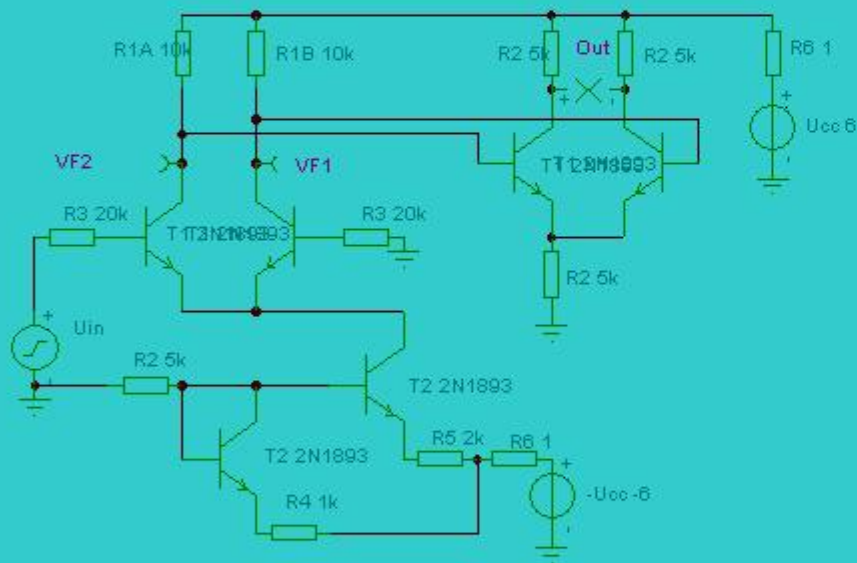

Analog circuit design & analysis

Rectification and Smoothing:

Electrical Circuit optimization by Tina:

DC Optimization of a Differential Amplifier

This example illustrates how to use Optimization to set the operating point of a differential amplifier.

1. Run Analysis/DC Analysis/Calculate Nodal Voltages to see the original VF1, VF2 collector voltages (3.78V).
2. Run Analysis/Optimization/DC Optimization... TINA will find new R1A, R1B values in order to reach the predefined VF1=2.5V, VF2=2.5V collector voltages (Optimization Target/DC Goal Function/Value).
3. Run Analysis/DC Analysis/Calculate Nodal Voltages again to check the new collector voltages
4. Select Analysis/Optimization Target and click on the VF1, VF2 voltage pins or select Analysis/Control Object and click on R1A, R1B then press the Select button to see the settings for this optimization.
5. Note that the value of R1A, R1B are changed after optimization.

Mitsubishi Robot Manipulator:

Two work-desks:

- For assembly operations
- Picture processing and pick and place operations

The program developing is provided through ***COSIROP*** program editor:

Robot & Workcell configurations:

The RCI Explorer window displays the following configuration details:

Description	Value
Robot Name	RH-5AH55
Controller Name	CRn-5xx
Operating System	Ver.H1
Copyright	COPYRIGHT(C)1999 MITSUBISHI ELECTRIC
Robot Language	MELFA-BASIC IV
Current Program	
Free Memory	206813 Bytes
No. of Robot Programs	15
No. of add. Axis	2

Download and Debugging:

The 'Up- and Download' dialog box is used to transfer programs from the PC to the robot. It includes the following options and fields:

- Download Program PC -> Robot** (indicated by a computer icon and a robot icon with an arrow)
- Program**
 - Complete Program
 - Delete all before Downloading
 - From Line:
 - To Line:
- Positions**
 - All Positions
 - From Position:
 - To Position:
- Name**:
- Show Dialog
- Buttons: **OK**, **Cancel**, **Help**

Programming:

```
C:\PROGRAM FILES\COSIROP\PROJECTS\DEMO\3.MB4
10 ' My first robot program
20 ' Author: Dipl.-Ing. Frank Heinze
30 ' Date: 07.04.2003
40 '
50 OVRD 10
60 MOV P1
70 HOPEN 1
80 MVS P2
90 HCLOSE 1
100 MOV P1
110 END
```

Yamaha Robot Manipulator:

-Controlled by PLC and robot controller simultaneously

-A SCARA robot arm with very high speed and torques

The task is:

- separation based on type marking

PLA, PAL, GAL, FPGA, CPLD Programming

PLA: PLS153
programming sheet

Programlap a PLS153 PLA-hoz

PIC Programming Course, PIC Demo board

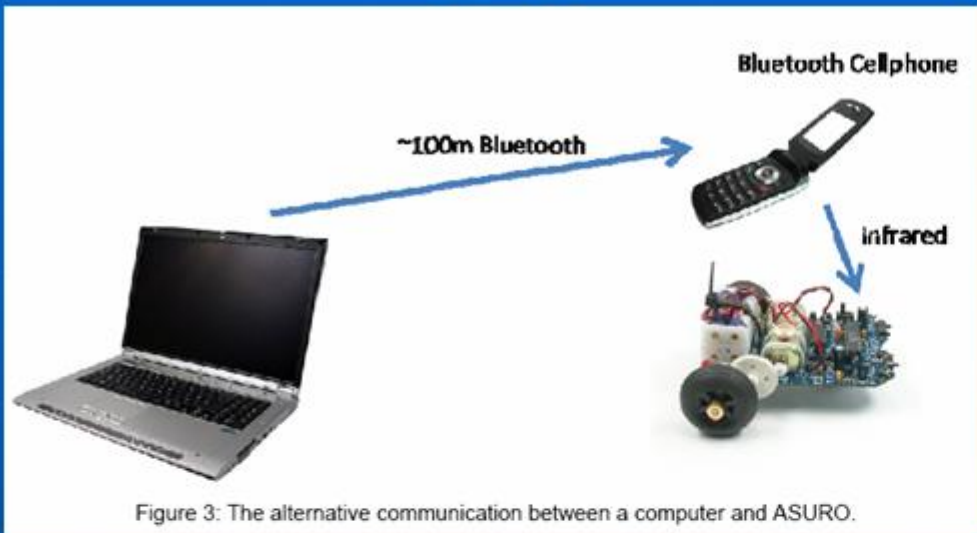

The Block Diagram of PIC 16F913

The Mechatronics Demo Board

Connection of the Demo Board and ICD-2 Programming Unit

Mobile Robot Designing & Path Planning, Training

The programming we can provide by the AVR μ P Program editor

We have to know how the *sensors* operate

Finally we have to *upload* the program to the μ P

First Try:

Switches 1: (signal analysis)

Switches 2: (schematics)

Flashing:

ASURO programming:

Mitsubishi PLC FX- Trainer:

Basics of Ladder diagramm programming,

A short Competition?
