Robotics in Poland: Trends and Challenges

Krzysztof Kozłowski

Poznań University of Technology
Chair of Control and Systems Engineering

Hardware: different constructions (wheeled and walking)

MiniTracker

MiniTracker 3/4WD

Inspection robot

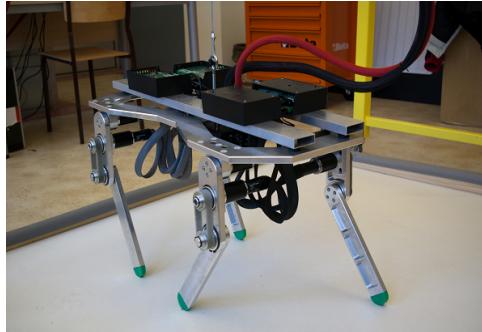

Leonardi

- „ research equipment: small size robots 10x10x10 cm and big robots available to carry up to 150 kg.
- „ different constructions: skid steering, car like robots, mobile robots.
- „ open engineering software and communication systems

Hardware: different robot constructions (wheeled and walking)

Safari

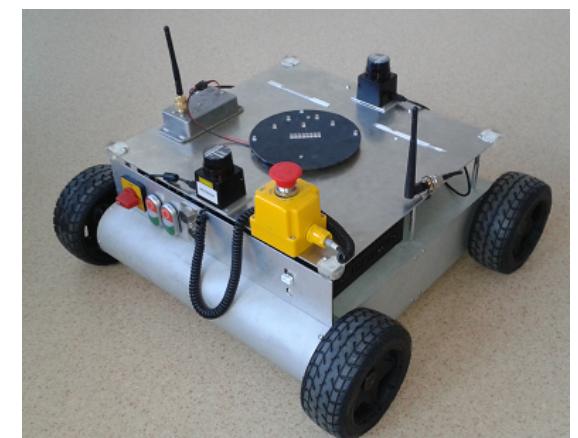

Walking robot

Multi agent systems

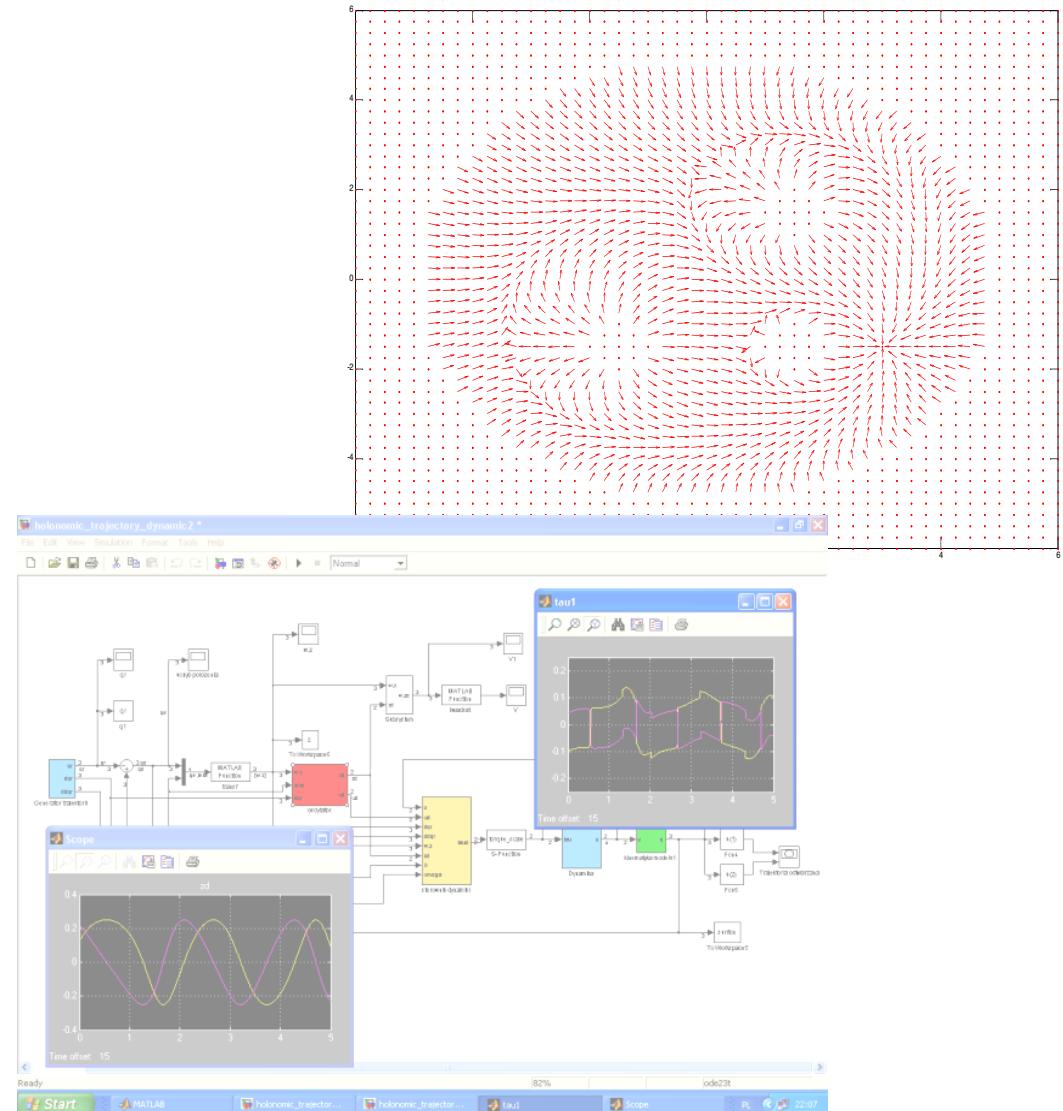

- Walking and wheeled robots
- Multi agent systems consisting of mobile robots, control coordination and collision avoidance

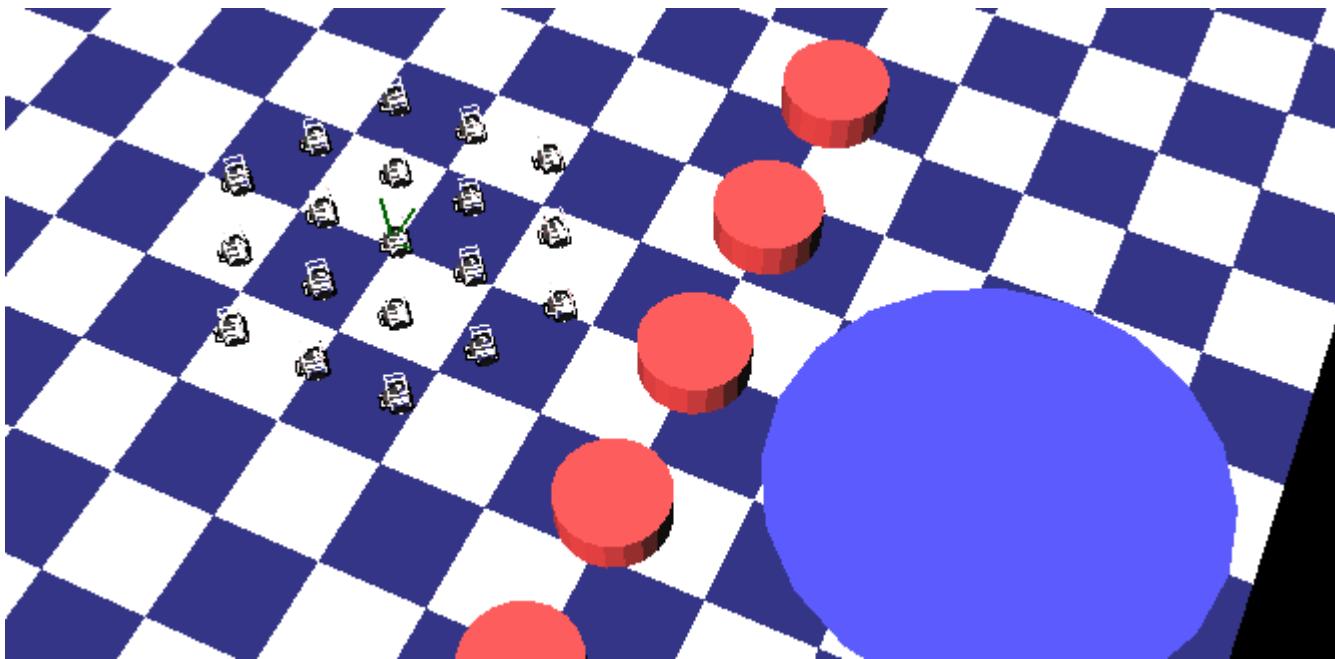

Research aims: control and navigation of different mobile robots and set of mobile robots.

- Trajectory tracking and path following.
- Control techniques making use of potential functions.
- Sensor fusion of different data measurements collected from a set of mobile robots.

Multi agent robot systems

Simulation and experimental results .

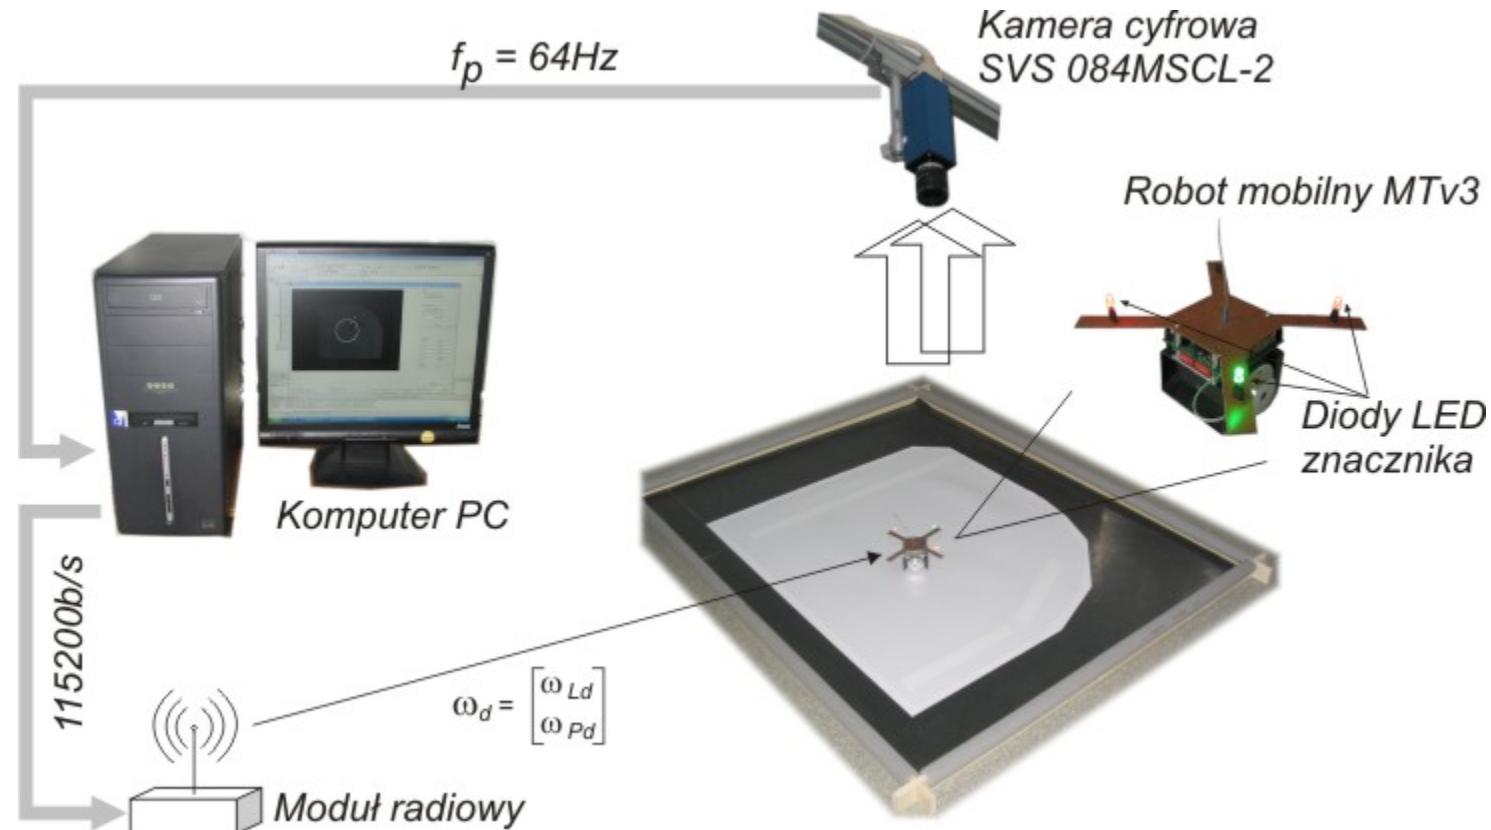

Collision avoidance.

Different control algorithms: linearization methods, leader-follower, behavioral approach.

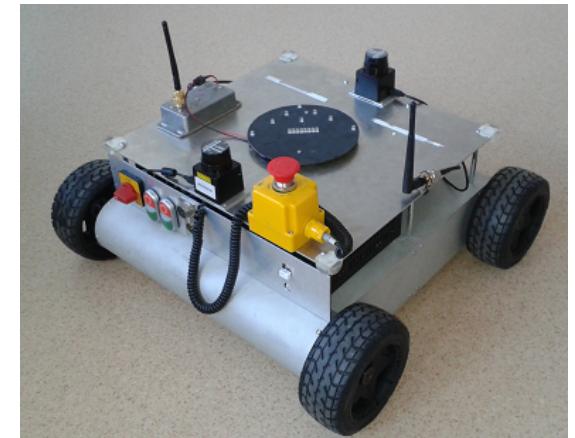

Localization of a mobile robot

Real time localization
methods of
multiagent systems
with collision
avoidance and
coordination.

High frequency of the
vision system and its
subpixel accuracy.

Join project at national level entitled Exploration and resque robot carried out by: PIAP – Industrial Research Institute for Automation and Measurements (coordinator), Warsaw University of Technology, Wroclaw University of Technology, Lodz University of Technology, Institute of Computer Science PAN, and Poznan University of Technology. Budget of this project is 1,5 million USD, The national Centre for Research and Development. Years of duration 2013-2015

Academic institutions involved in research projects at European level

Warsaw University of Technology

Wroclaw University of Technology:
Project LIREC <http://lirec.eu/project>
ReMiDi <http://www.remedi-project.eu>
Social robots <http://www.flash.iiar.edu.pl>

Museum of Science and Industry, Chicago
Heriot Watt University, Edynburg
People for the Ethical Treatment of Animals, Norfolk

PIAP carried out many projects
ESA, ESO

Summary

- Research and development in the area of Robotics and Automation and educational (field of study Automation and Robotics, Double degree diploma in English: Smart Autonomous Aerospace and Autonomous Systems carried out by Chair of Control and Systems Engineering and University of Evry),
- Team consisting of about well qualified 30 people,
- Realization of projects supported by NCBiR and NCN National Science Centre.
- Cooperation with different academic institutions (France, Germany),

Thank you for your attention
