

One Hundred Years of Robotics: Where will We Arrive?

Prof. Paolo Fiorini, PhD

IEEE Life Fellow

Department of Engineering for Innovation Medicine, University of Verona

VERONA - Italy

We are close to the century anniversary of robotics development, and it is worth examining how this new science has evolved in the past and how it could develop in the future. An educated guess of future development could be based on the many road maps developed by many Countries, but how reliable are these forecast? I will examine some of the results of the Euron Robotics RoadMap of 2004, to see how correct those prediction are 20 years later.
