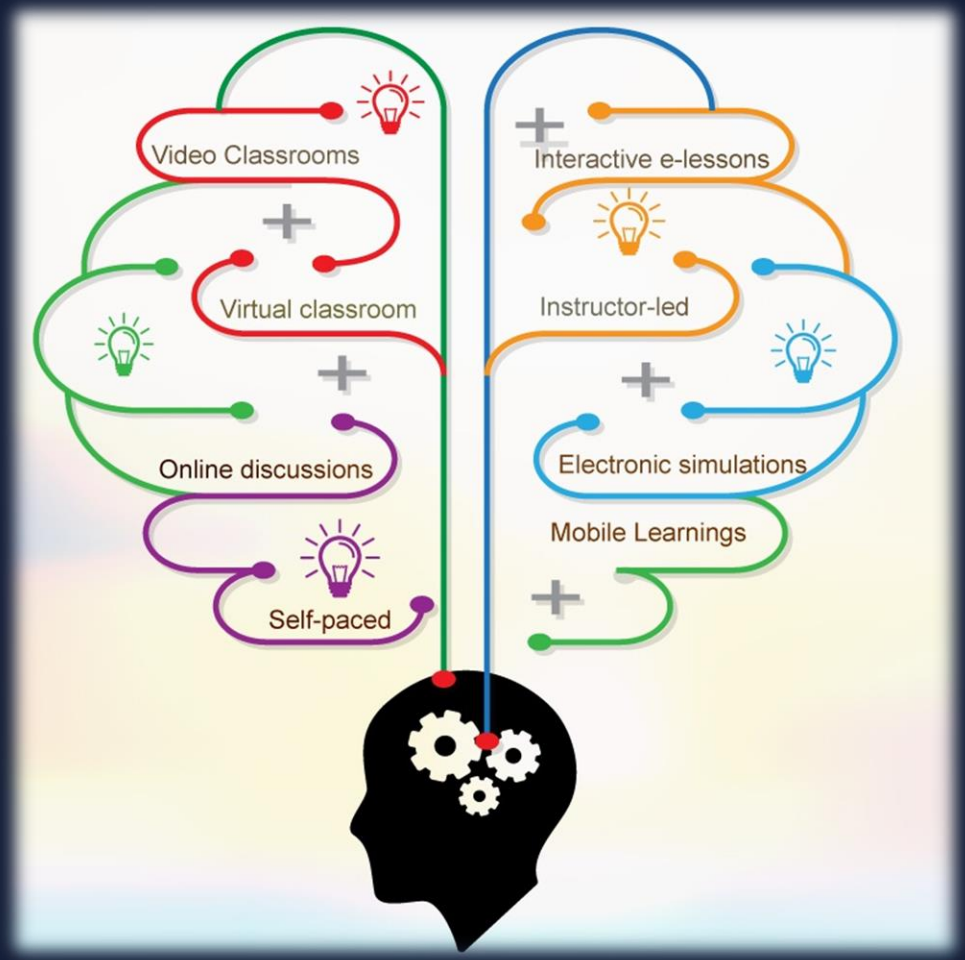
HOW CAN IDEAL DIGITAL EDUCATION BE CHARACTERIZED?



- ✓ Digital pedagogy prepares students for the digital environment, with its approach and pedagogical tools for the expectations of the digital world.
- ✓ The essential difference does not appear in whether computers or smartphones are used in or outside the classroom, but in the approach and processing of information.
- ✓ Through educational informatics, modern pedagogical methods and the paradigms of personalized knowledge transmission have a greater role compared to traditional models.

SUMMARY

- ✓ The necessary introduction of online education - positive changes in the use of modern tools in online education.
- ✓ The importance and necessity of the teacher's personal presence.
- ✓ Students find long narrated presentations less motivating and learnable, and methodological and tool usage diversity in online education is very important to them.
- ✓ Emphasis is placed on instructional videos, the production of which in appropriate quality requires further development in terms of expertise.
- ✓ One of the biggest disadvantages of online education was experiencing isolation from peers, and the lack of daily personal contact.
- ✓ It caused difficulty to manage the time schedule independently.
